

MIXED TUBE LENGTH FOR MATRIX HOUSINGS

When an application requires "D" (solenoid held) or "E" (latchdown action) switch modules to be combined with "A" (momentary), "B" (alternate action) or "I" (indicator) switch/indicator modules in the same Matrix assembly, STACOSWITCH offers mixed tube length Matrix Housings.

The IM Matrix housing length for "A", "B" and "I" modules is 2.81 inches while the "D" and "E" housing length is 3.28 inches. As depicted below, all modules and pushbuttons appear the same from the operator side of the panel. When specifying/ordering the Matrix Housing Assembly which includes "D" or "E" modules, indicate their intended location by using the location code from the IM Matrix System Catalog or request STACOSWITCH IM Matrix Worksheet, form #522.
