

MULTIPLE DISPLAYS

The various divided screen arrangements offer the opportunity for combining different display types within a single pushbutton.

A two, three, or four-way split screen can provide display types in many combinations. For example: Types 1 and 3; Types 2 and 4; Types 6 and 8.

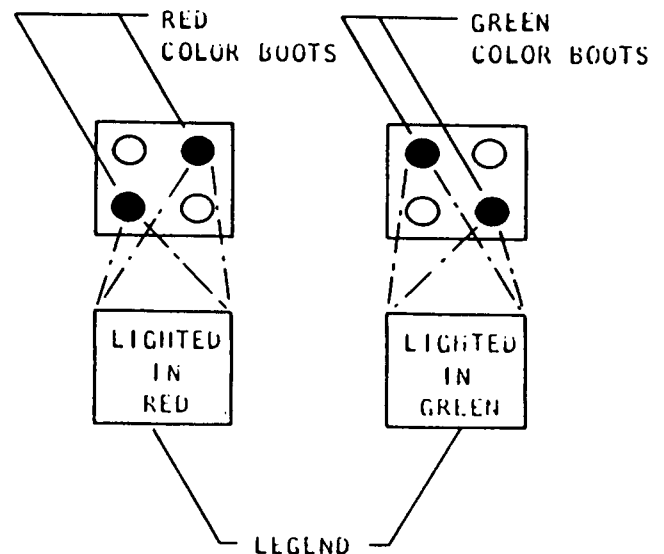

HIGH BRIGHTNESS

Legend displays may be intensified by the use of a highly reflective display screen divider, which greatly increases effective light output (foot lamberts).

2 COLOR LIGHTING OF LEGEND

Two color lighting of a single legend is obtained by the use of two colored silicone rubber "boots" in alternate corners. See example: By illuminating lamps 1 and 3 only, the display color will be red, and by illuminating lamps 2 and 4 only, the display color will be green. Boot colors available are blue, green, red, white, amber, and yellow.

All above noted combinations are available on special request only. Consult STACOSWITCH for details.
