

## Applications

Staco Systems' line of rugged keyboards are specifically designed for use in law enforcement, industrial, and public safety applications, where performance and reliability are required.

Having passed extensive temperature, humidity, shock, vibration and flammability testing, our rugged keyboards are fully operational in virtually any mobile, wet or otherwise hostile environment.

Staco Systems' keyboards are built using advanced molded elastomer technology for serious environmental protection. Even the built-in touch pad, which includes both left and right mouse buttons to easily control a PC in limited-space areas, is completely water-sealed. We also provide custom-designed legends that are engraved with an advanced laser process used to ensure durability.

Our designs withstand the most demanding environments:

- Military
- Law enforcement
- Industrial
- Oil and gas
- First responder
- Aerospace

## Data Entry Solutions Range

Staco Systems offers a full range of custom Data Entry Solutions including rugged keyboards, keypads, tablets and laptops. We design products to fit your application, specifications, budget and timeline.
